

Servicing & LEV testing for the paint finishing industry

Premiere Servicing’s “*care plan*” provides superb levels of preventative maintenance scheduling which rewards our customers for their commitment to us. From a single one-off service visit to a multi-year contract, whatever your requirement, we are here to help and provide support when you want it.

The **Primary contract “care plan”** is for clients who want to schedule their own visits once a year. We will carry out a service on part or all their plant and provide them with a detailed service report with recommendations where necessary. Any consumables purchased as part of the service will be fitted free of charge.

The **“Enhanced contract care plan”** is designed with customers who require more support and commit to a pre-programmed service visit twice a year or once a year over a two-year period. In return we will offer discounts on breakdown hourly rates, spares used on the service and priority on any breakdowns.

Our **“Ultimate contract care plan”** is for customers who require high levels of customer care including minimum downtime. 2 or 3 Pre-programmed service visits are arranged each year over a 2 or 3-year period. In return we offer all the support of an enhanced contract plus the guaranteed stocking of agreed critical spare parts. We will also provide a free of charge maintenance manual giving minor on-site maintenance procedures.

	Primary	Enhanced	Ultimate

Servicing & LEV testing for the paint finishing industry

If your plant is feeling its age, if running costs are spiralling and reject rates are increasing, or you just need to assess your plants overall performance, you may require a plant “health check”.

This is much more than a standard service and entails carrying out a detailed plant survey including the measurement of extraction rates, noise levels, lighting levels, motor running currents and combustion levels.

Other checks include an inspection of the plant wiring, control panel, all safety interlocks and to carry out an internal temperature check using a calibrated data logger.

If the original plant specification is available we can use it as a bench mark for analysis and advise of any changes accordingly.

Included within the health check would be the service of all gas burners, changing of filters where applicable and the preparation of a comprehensive report with photographs and recommendations.

<i>Complete burner strip down and service</i>	✓
<i>Combustion analysis check</i>	✓
<i>Oven data log</i>	✓
<i>LEV test on any spray booth or mix room</i>	✓
<i>Testing of all plant safety interlocks</i>	✓
<i>Function test of control panel</i>	✓
<i>Measurement of motor running currents</i>	✓
<i>Visual check of all electrical cables</i>	✓
<i>Visual check of structure of all plant including doors, lights, ducting,</i>	✓
<i>Supply of detailed “health check” report with recommendations as applicable</i>	✓
