Netting Permit Byelaw and the impact assessment

The Netting Permit Byelaw, permit conditions and the final impact assessment (mandatory template) have been sent to the Marine Management Organisation (MMO) for quality assurance.

This is part of the process, before the documents are then sent to the Secretary of State for confirmation.

The version of the impact assessment (including annexes) that was used in the consultation phase is accessible by clicking on the link provided.

Two other reports were used in the later stages of the process prior to submission to the MMO.

It is expected that a final D&S IFCA impact assessment report will be produced shortly that fully documents the complete process from start to finish.
