

# Mobile Fishing Permit Byelaw – Additional review of permit conditions (September to October 2017)

D&S IFCA is currently conducting a further review of the permit conditions for the Mobile Fishing Permit Byelaw. This is a different consultation to the recent three year review of permit conditions. This consultation is focussed on specific issues including the use of inshore vessel monitoring systems and potential changes to the management of the inshore potting agreement. It is suggested that stakeholders **read the Mobile Fishing Byelaw – Development report for additional changes to permit conditions**. You can influence decision making and it is important that you have the opportunity to engage in the process.
