

## Rescue your frozen characters

How can we rescue the frozen characters? Experiment what helps the ice melt faster: Sugar, salt, sand or water? Choose some small toys you have in your house, doesn't have to be lego. You could choose any characters or pretend living creatures you want to rescue.

What you need:

- Lego men or any other small toy characters/pretend living creatures you want to rescue
- Ice cube trays, cake trays or silicon cup cake moulds
- Cool water and water sprayer (if you have one)
- Jug
- Freezer
- Salt
- Sugar
- Sand or soil

What to do:

1. Place your chosen character inside the tray or silicon mould
2. Fill the space with water
3. Put in the freezer until frozen
4. Take out of the freezer and put ice characters in a tray, on a plate or in a bowl.
5. Select different materials to put on top of characters to rescue them such as sugar, salt, sand, soil and water.
6. You could save the cool water till the end. If you have a sprayer this can be a fun thing to do in the hot weather to cool you down. Or you could use a jug to pour on the water.
