

Gas Fired Boilers

A gas boiler is a boiler that uses natural gas or LPG (Liquefied petroleum gas) to heat water. The boiler is used to heat water in very much the same way as any other style of boiler, the key difference being that it is gas powered.

There are numerous types of gas boiler and as such, they are not restricted to one model. This creates a flexibility to install in any home, catering for various user requirements and preferences. The usual varying factors influencing the choice of a new gas boiler are spare space in the home and whether or not there is a need for an immediate hot water supply.

Gas Cookers

If you are installing a gas cooker or replacing an old one there are many different choices available from high street stores with prices to suit everyone. If a new kitchen is being installed at the same time as installing a gas cooker, then new gas pipes may need fitting and gas connections may need altering which we are very capable of doing here at Jackman Plumbing.

When installing a gas cooker the engineer will disconnect your old appliance and fit a new gas hose and bayonet. The engineer may also fit a security chain or a stability bracket to prevent the cooker tilting if required. Once this is completed the next step of installing a gas cooker is to position the cooker, install it and then test it for safe working operation. You will then be provided with the documentation. After installing a gas cooker a Gas test will be required and a gas safety certificate will need to be issued, with Jackman Plumbing Ltd this is included with installation.
