JETSTM Product Recommendation

If you are currently using JETSTM older EFD or FD-VPC valves in your vacuum system, you should consider converting to JETSTM new Piston valve. The Piston Valve offers a number of improvements that will reduce your costs over the lifetime of your vacuum system.

Benefits:

- Reduce maintenance hours
- Cut spare parts consumption
- Improve reliability and life expectancy of components
- Reduce the overall life cycle cost of your vacuum system

Why upgrade to the new Piston Valve?

- Both EFD and FD-VPC valves use older, more vulnerable lifting membranes.
- The Piston valve uses a much more reliable piston design that has replaced the lifting membrane entirely and is far less prone to wear and tear.
- More modern materials such as resilient silicone instead of rubber.

JETSTM products are designed to be environmentally friendly through the reduction of water consumption, in turn reducing waste. As JETSTM UK Sole distributor for land and transport, we felt it was important to show our support where possible to communities less fortunate than our own by helping provide safe, clean water. AquAid is a national, award winning water cooler company with the aim of bringing sustainable water solutions to Africa. We decided to incorporate their water dispensers into our premise

Part of the sustainable development project includes providing communities access to clean water supply daily. To date, they have built 5,000 water pumps, also known as Elephant pumps. After becoming more involved with AquAid and finding out about the elephant pumps, we wanted to participate further. We decided to donate to AquAid to enable them to build another elephant pump within a deserving community in Africa. Our donation along with the help of those living in the local area provided the opportunity to build a Well that will provide the families, access to a clean water supply all year round.
