The magnificent otter statue that Otter vacuum systems had commissioned made of poplar ply

Seminar and the Showman's Show

Otter Vacuum Systems has been quietly working away as the only JETS™ Land and Transport distributor in the UK. But in the last year we have really made our mark in supplying vacuum technology within the land and transport mobile/event markets. JETS™ has done extremely well globally, they've set the record for the world's largest vacuum sanitary installation in Castelão stadium in Fortaleza, Brazil, for the 2014 FIFA World Cup.

Otter Vacuum Systems hosted a JETS™ seminar during the Showman's Show at The Donnington Valley Hotel. The seminar was for on-site crews that service the vacuum toilets. The crews received vital tuition and were awarded framed certificates for passing the repair and maintenance training. Over 30 crew members participated from 7 different countries with the training being focussed on hands on instruction.

We had the pleasure of exhibiting at the Showman's Show again this year alongside JETS™, the show was a delight and a huge success for us. Meeting potential and existing customers from all over the world is a pleasure and a real bonus to the show. Andy Baerselman a natural world sculptor based in the New Forest created a wooden otter statue for us for the show which was a magnificent sight and attracted plenty of attention.

For more information about our products and the services we offer don't hesitate to contact us either phone or email.

Snoozebox & domestic progress

Otter Vacuum Systems has had the pleasure of a joint venture with Snoozebox, temporary hotel accommodation, to create the world's first fully-serviced luxury portable hotel, 'Crash Pad' to operate at Thorpe Park the nations thrill capitol. It has been a very exciting experience to work with Snoozebox, who share the same passion for innovation and uniqueness as we

do. We supplied over 60 toilets to 'Crash Pad' located within walking distance from one of Thorpe Park's most adrenaline fuelled rides 'The Swarm'.

People are now beginning to realize the importance and huge benefits of vacuum technology. Otter Vacuum Systems has in the last 12 months retrofitted vacuum

into an existing London mansion and is currently installing vacuum in a new build in Hampshire. This is vastly advantageous for the property owners as they are saving 90% of their water usage. The energy consumption is also extremely low at approximately 4kW per year/ person.
