

Spectrum Offshore Ltd has two operational companies comprising Spectrum Geosurvey Ltd that provides geophysical survey solutions and Spectrum Vessel Services Ltd, a multidisciplinary vessel operator that sources, manages and operates coastal work boats.

Our clients are international companies in the renewable energy sector and other offshore construction projects.

Our aim is to conduct our business in ways which contribute towards protection of the environment and prevention of pollution.

Therefore, we will always strive to:

- comply fully with applicable legal requirements and other environmental obligations which apply to our business activities, products and services;
- consider the environment when planning each project and when planning our other operational activities;
- conduct all operations in a safe, efficient and environmentally responsible manner;
- ensure that our employees and others who work for us understand the environmental aspects of their work and are sufficiently aware and able to work in an environmentally responsible way;
- select, operate and maintain vessels and their associated equipment so as to eliminate or reduce as far as practicable our carbon footprint and that of our clients;
- identify other stakeholders who are relevant to our business, understand their needs, views and opinions on environment matters and, as far as practicable, satisfy their relevant requirements;
- in purchasing products and services and in providing our products and services to our clients, we will maintain a life cycle perspective in pursuit of the aim of this policy.

We implement and maintain a Business Management System which provides us with a robust framework for meeting the aim and objectives expressed in this policy. It also enables us, by means of 3rd party certification, to demonstrate that we satisfy ISO 14001:2015 and other relevant management system standards, as required by many of our clients.

We will regularly review our capabilities and respond to the changing needs of the offshore industries and will take timely action to satisfy new and changing environmental requirements. We will consider the environment as we continually improving our resources, our services and the processes by which those services are delivered. Ultimately, this means continually improving our Business Management System and enhancing our environmental performance and, where we have influence, enhancing the environmental performance of our key stakeholders.
