

**Senior Test Engineer,
Software (C++, Java, Ruby etc.), Linux, Test Automation,
Paris, €65,000-€80,000 plus Benefits!**

Introduction:

Do you want to work with **some of the best minds in your field** and become part of a globally recognised, premier company who have won numerous awards for innovative products and services?

How about playing an **important and valued role** that directly contributes to the success of these award-winning products?

If so, we **currently** have a job opening for a Senior Test Engineer that could just be exactly what you've been looking for!

About your potential new employer:

This **Senior Test Engineer job opening** is with a world-renowned company in the broadcast media domain who've **won numerous awards, year after year**, for their innovative products and services!

As you'd expect, they attract talent from all over the world, have multiple offices across various countries, boast a formidable list of customers and clients, and are **on a mission to raise the bar and set new expectations** within their domain. **Will you help them** in achieving their mission?

A closer look as to what you, the new Senior Test Engineer, will be doing!

Your craft will be to **design and develop software for testing an array of products** responsible for managing first-class video content across numerous environments.

Developing algorithms and tests is something you're already familiar with. Re-architecting existing test designs to improve efficiency and sustainability is something you look forward to doing.

Setting up and maintaining development test environments is well within your capabilities, and you're quite capable of leading on/off-shore development test teams, when needed.

You understand that no man is an island and enjoy working with QA teams to ensure overall objectives are achieved.

About your skills:

You're highly skilled in test engineering/development and most likely have over 7 years experience.

Object-oriented coding experience (C++, Ruby, Java) is within your arsenal, and you have significant development/testing experience using Linux, Networking (TCP, UDP, IP), Client/server distributed architecture, and have a good knowledge of Cloud/Virtualisation technologies such as AWS (Amazon Web Services), VMWare, OpenStack, KVM etc.

You're an excellent communicator and possess strong troubleshooting skills, able to get to the bottom of tricky problems, whether they're internal or external.

Alongside your test engineering skills, **you possess the ability to think from a customer's perspective** and can anticipate real world problems that may arise, eager to test them!

What should you do next?

Don't delay! We're actively recruiting for this role so APPLY NOW by forwarding your CV to Remi@Lodestar-rec.com. We'll aim to respond within 24 hours and look forward to discussing the next steps.

Not quite ready or have questions? Not a problem, **call Remi Damiani on +44(0)203 8765 111** (anytime before 6:30pm), or message him on Remi@Lodestar-rec.com
