

## Sussex IFCA Interactive Map Overview

The Sussex IFCA interactive map contains a wide range of data layers which enable us to visualise aspects of our marine environment. This includes boundaries such as the Sussex IFCA District, the Biosphere boundary, Marine Protected Areas, and Sussex IFCA byelaw boundaries. The map also offers environmental data such as seabed habitat maps, ecosystem services layers, bathymetry and 50 metre depth contour lines. Seabed videos within sites across the Sussex district are also accessible on the interactive map alongside information such as average port tonnage (2017-2021), fishing effort layers and protected wreck sites.
