NEWS  
SHEET

**Factory  
Order Offer  
on new  
Tasar hulls -  
£7,600** includes VAT

## Winter 2018/9

Signal Locker plan to import a batch of new Tasar hulls into the UK this winter. In the past we have offered two levels of specification: Pack 'A' or Pack 'B', being either a bare hull and deck, or a complete boat.

For this year, we are dispensing with both in favour of a standard 'Measurement Boat'. This comprises the basic hull and deck plus all the fittings that are included when a Tasar is weighed-in for a regatta.

A full specification list with approximate weights can be seen on the order form below.

The standard specification of the 'Measurement Boat' does not include the mast, spars, sails or foils.

However for six months following delivery, you will be eligible for a 15% discount on all of those things, and in fact any equipment in Signal Locker's catalogue that is bought for your new boat.

### 'Measurement Boat' Price

- £7,600 including VAT ex works  
Signal Locker Lymington UK

### Payment Terms

- £2,500 with order 29 Oct 2018
- £2,500 immediately prior to shipping from XSP @ 1 Feb 2019
- £2,600 on delivery in the UK.  
@ 31 March 2019

### Order and Delivery dates

- It is only viable to import boats in container load quantities of four or more. So this factory order offer is subject to there being sufficient demand.
- Our order to Xtreme Sailing will be finalised on 29 October 2018, so orders for new boats should be with us by Sunday, 28 October
- The hulls will be built by the first week of February 2019, shipped in mid February; and delivered to the UK by the end of March 2019.

## Outline Specification...

The specification for our factory order is for the hull, deck and thwart assembly, plus fittings that are typically installed when the boats are in 'Measurement Trim'. A complete list can be seen below, but in outline...

- Primary Hull Fittings: forestay U-bolt, mast pin, hatches, gudgeons, thwart strut
- RCB Shroud Tracks: tracks, underbars, RCB cars, cleats, pull-back line and handle
- Toestraps: saddles, cleats, padded toestraps, adjuster lines and shock-cord tensioner
- Jib Tracks: tracks, cars, cleats
- Traveller System – track, 3-pin channel top car, ratchet blocks, traveller line & cleats
- Mainsheet Swivel and Block – swivel with mainsheet ratchet block only

## Hull Specification...

The hull and deck assemblies imported this winter will be built by XSP to the new specification, including the new centreboard case and thwart arrangement, revised deck laminate and the exclusion of the plastic Harken handholds. These changes to the hull and deck mouldings were made two years ago, though this winter's batch will be the first of the new-style boats to be brought into the UK. The changes fall into three categories:

1. Some areas of the boat have been strengthened...
  - The side decks and cockpit sides have been strengthened and stiffened
  - The thwart has been reinforced
2. Other changes have been made in order to maintain overall hull weight...
  - The foam thickness on topsides, forward and aft decks has been reduced from 8mm to 6mm
  - Wood backing pads have been replaced with GRP reinforcement
3. The old daggerboard case has been replaced with a foil shaped box...
  - The block of crash foam behind the board is no longer required
  - The new box is able to accommodate a daggerboard with the same section as the 29er.
  - However there has been no change to the daggerboard section or size, so we will still need some material around the box perimeter top and bottom to make the board slide as it should.

## Tasar Weight...

The new hull and deck assemblies are approximately 1.5kg heavier than the previous specification; the minimum weight of hulls leaving the XSP factory will now be 61kg. There is, however, no change to the minimum weight of boats in measurement trim, which remains 68kg, allowing 6kg or 7kg for the weight of fit-out equipment. The equipment selected to be on the standard Signal Locker Measurement Boat standard specification will typically weigh close to 6kg, however it is possible for the fit-out weight to be anywhere between 5.5kg and 9kg, depending on the exact equipment selected.

## New Boat Order Process...

- Contact us by phone or email: +44 (0) 7970 132110 info@tasarsailing.com
- Equipment included with new boat hulls will normally be as per the attached 2018/9 specification. However, an individual specification sheet, offer and order form will be prepared for each Owner prior to order acceptance.
- Orders based on an agreed individual order form will be confirmed on receipt of first stage payment.
- Price of new Taser to standard Signal Locker Measurement Boat specification:- £7,600 including 20% VAT, with delivery ex.works Lymington UK.
- Stage payments: £2,500 with order, £2,500 on shipping from factory, £2,600 on delivery.
- For a period of 6 months following delivery, additional fit-out equipment (eg. mast, spars, sails, foils etc.) can be purchased for the boat at a discount of 15% from Signal Locker published prices.
- Orders will be accepted on Standard BMF Terms of Business (Issue15a).
- Payments will be accepted by bank transfer only.

# 2018/9 Tasar Specification and approximate weight
