

GRADING

Variclean

Produce cleaning system

Separation for the gentle removal of clod, stone and haulm

Designed to work with all of Herbert grading systems, or as a standalone machine, the Variclean incorporates the very latest in technological developments that combine improved cleaning of crops, gentler handling and low maintenance.

The Variclean incorporates a number of significant features that give improved cleaning and better performance for users. These include individual hydraulic driving rollers for greater flexibility and optimised separation for the gentle removal of clod, stone and haulm.

Each Variclean features 5 polyurethane fluted rollers and 4 clod rollers as standard. The speed of the spiral rollers can be varied, with separate speed and height controls for the clod rollers, which can also be easily reversed. Each clod roller rotates around the circumference of the adjacent fluted roller. This 'constant geometry' design maintains a consistent gap and in every cleaning position giving control of clod, stone and small crop removal.

We treasure your roots

TECHNICAL DATA

The impressive VariClean is a gentle effective high capacity clod, stone, haulm and weed separation system

FEATURES

- Herbert intelligent control system
- Graphic display for easy and clear setting/adjustment
- Interchange modular design
- Choice of spiral roller flight heights
- Automated "stuck item" clearing system on clod rollers
- Individual roller drives for maximum flexibility and control
- Angle adjustable module providing variable cleaning effect
- Robust build for heavy conditions
- Hydraulic driven system
- Optional machine widths of 900, 1200, 1800 and 2400mm
