

January 2026

Dear valued partner,

New advanced robotics and machine Investment for 2026

As a long-standing customer, we're thrilled to share details of our substantial further investments in cutting-edge technologies and advanced robotics. Tailored to amplify what you already rely on, these upgrades promise sharper accuracy, tighter security, and effortless integration into your workflow.

In 2025 we commissioned Delta 6 PVA selective conformal coating; a bespoke clean room, installed two Promotion 9544 robotics through-hole solderers; Koh Young Zenith Alpha HS+ True 3D AOI; added in-house cable & wire assembly and 10 new staff boosting our Quality Dept, SMT area and Engineering. A J-STD-001 certified trainer was also added – we've even now trained, and certified, some of our customers to IPC class standards !

For 2026 we've committed £750,000 to expand our capabilities, including a new Europlacer pick-and-place platform, advanced reflow ovens, deck printers, and two further Promotion 9544 robotics, now totalling four. Our infrastructure has been strengthened through enhancing our Business Central computer systems.

To support this growth, we have expanded our facilities with new offices and welcomed ten talented new team members, six of whom strengthen our engineering and quality assurance teams. We've further bolstered our engineering department with seasoned new staff hires, onboarded an experienced SMT team lead and introduced training initiatives for our recently recruited engineering degree graduates. Collectively this ensures every product exceeds expectations whilst offering a scalable solution.

We welcome our customers to visit our site and see our facility.
