TOOLKIT | web design

Accessibility Statement

What We've Done

- Designed all Toolkit CMS templates using semantic HTML.
- Ensured keyboard navigation and visible focus states are supported throughout.
- Used high-contrast colour schemes and accessible font sizes as standard.
- Tested forms for proper labels, error messages, and logical tab order.
- Performed automated and manual audits using tools including axe DevTools, WAVE, and NVDA.

Scope of Compliance

The following areas are currently compliant with WCAG 2.2 AA:

- www.toolkitwebsites.co.uk
- All default templates and front-end outputs of the Toolkit CMS
- CMS core UI for end clients (excluding custom code inserted post-launch)

We are continually working to improve the accessibility of additional features and integrations.

Known Limitations

While most of our content and templates conform to accessibility standards, certain third-party widgets or embedded services (e.g., external booking tools or payment providers) may not fully meet WCAG 2.2 AA. We aim to advise clients on best-practice alternatives when possible.

Feedback and Contact

If you experience any accessibility issues or require content in a different format, please do contact us:

support@toolkit.uk

01243 913913

We aim to respond within 1 business day.

Statement Version

This statement was last updated: October 2026

We review accessibility across our systems periodically or following major updates.
