## Tripsafe™ - Secures Electric Cables to Carpets

**TRIPSAFE™** is a reliable non-adhesive method for securing electric wire cables to looped carpet, carpet tiles or Berber carpet. *(Not suitable for cut pile carpets)*

The press down 'hook' grip secures the cables without using damaging adhesive tape and presents a low profile whilst keeping the cables in place. Scuffing feet and vacuums will not move **TRIPSAFE™** and it will stay in place until you 'lift' it off.

Unlike adhesive tape, **TRIPSAFE™** secures the cables in place and also allows you to pull any slack cable through its tunnel underneath the product.

**TRIPSAFE™** can also be used on stair carpets, along carpet wall trim and around curves. It is ideal for use in computer rooms, assembly halls, conference rooms, sound stages, office workplaces, tradeshow booths, restaurants, hotels, retail stores, hallways, stairs and doorways.

Use **TRIPSAFE™** cable covers at your presentations to eliminate tripping hazards by hiding those wires and cables in a polished and professional-looking manner - and when it's time to pack up, simply lift the **TRIPSAFE™** and roll it up ready to carry away.

You no longer have to worry about leaving messy adhesive tape residue on carpets or on your wires and cables.

**TRIPSAFE™** is made from durable nylon fabric with a hook backing. It can be cut to length without fraying and is re-usable. It can also be wiped or washed.

- 110 mm. wide
- 1.8 m. strips or 10 m. rolls
- Available in yellow or grey

Purchase online using the secure cart facility or post or email the completed order form. Credit or debit card orders can also be taken over the telephone.
